Assignments: There will be about eight assignments comprising problems from the textbook. On average you should plan to spend about five hours on a given assignment, and you should have about ten days to complete each one. Homework should be written neatly and legibly on 8.5” x 11” paper. Late homework assignments will be accepted but subject to a penalty equal to 20% of the full value of the assignment. Homework solutions will be posted on the website and no credit will be given for homeworks submitted after the solutions are posted. Some problems require verification with a circuit simulation program, but only those specifically identified in the assignment (not necessarily as specified in the text). Please submit only enough simulator output to demonstrate your solution.

These assignments are an integral part of the lecture series and contribute a significant fraction of the overall value to the student.

Notes: Students are responsible for taking and maintaining their own notes. Instructor notes or handouts will not be provided.

Exams and Grading: There will be 2 exams during the semester and one comprehensive final. All of the exams will be open book and open notes. You will need a scientific calculator or computer, not a cell phone. The final is not optional.

Grading:
Homework 20 %
Midterms 2 at 20 % each
Final 30 %
Class participation 10 %

UVM Policy on Religious Holidays: Students have the right to practice the religion of their choice. Each semester students should submit in writing to their instructors by the end of the second full week of classes their documented religious holiday schedule for the semester. Faculty must permit students who miss work for the purpose of religious observance to make up this work.
